

# Advancing bioenergy with our expertise in forestry.

The natural link between forestry, low carbon heat and bioenergy is fundamental to sourcing, operating and maintaining sustainable energy ecosystems. At Reheat, we provide consultancy, innovation and supply chain expertise in bioenergy and forestry.

Our unique, first-hand experience spans from sustainable forest management, wood fuel production, and the industrial application of bioenergy - which has a huge role to play in achieving a future of Net Zero carbon.

Our advisory work spans major projects with the Forestry Commission, UNDP, and National Forest Company, helping clients source biomass fuel from local forests and implement efficient heating systems.

Beyond the forest gate, our bioenergy expertise includes advanced technologies like second-generation sustainable aviation fuel (SAF), bioliquids, liquified biogas, and contributing to national policy. Our in-house specialists can also advise on ways to convert organic by-products into energy.

## Our bioenergy and forestry services

- ✓ Bioenergy research and application for industrial decarbonisation
- ✓ Supply chain development and strategies for sourcing sustainable biomass fuels
- ✓ Forestry innovation and development programmes
- ✓ Policy and technical insights for government and industry
- ✓ Converting organic residues and by-products into energy

## Discover how Reheat can help you get more from bioenergy and forestry.

Our impact:

**86%** Of a global drink producer's 'Most Desirable' Bioenergy Standard categories hit using Reheat's system.

**50%** Lower costs have been achieved from our bioenergy projects, compared with alternative fuels.
