

Low carbon heat funding is often the key for your project to go ahead. At Reheat, we have a proven track record in accessing funding for our clients.

The funding landscape can often be vast, complex and hugely time consuming, which is where an experienced team can help you access the funding you need, taking away the pain often involved of navigating the process.

What's more, because we are both a team of engineers and consultants, we typically deliver the work the funding was designed to enable. This ensures the funding is used in the right way, and gives you exactly the service you need to fulfil your project.

Examples of funding schemes we actively work with, include:

- Heat Network Efficiency Scheme (HNES)
- Boiler Upgrade Scheme (BUS)
- Scotland's Heat Network Fund
- Renewable Heat Incentive (RHI)

Our Low Carbon Heat Funding Services

- ✓ Technical assessments to understand where funding is best applied
- ✓ Scoping low carbon heat funds and assessing eligibility
- ✓ Engaging with funding bodies or scheme administrators
- ✓ Carrying out funding applications
- ✓ Completing the works the funding has enabled

Discover if your project qualifies for low carbon heat funding.
